Conclusion

- The growth dynamics in different sectors have been largely different.
Specifically:
 - The growth in consumer loans has remained elevated,
 - The growth rate of mortgage loans has declined,
 - The growth in business loans has been mainly supported by the persistently high growth rates in the construction sector.
- Structural shifts have been observed in the consumer loan growth dynamics (increase in maturities, as well as growth of consumer loans with real estate collateral), which may indicate potential risky behavior.
- The financial cycle index has remained almost unchanged compared to the previous quarter, which is driven by reduced activity in the real estate market.

The CCyB has been set at 1.75%.
